

Water Conservation...

is more than a drought-year catch phrase. It should be the way Utahns always approach our critical responsibility to carefully manage our water supplies.

If you had access to an irrigation device that would precisely sense your landscape's changing water needs based on soil types, plant types and variations in weather, would you use it? These "devices" use a new technology that does exactly all of the above. The technology is known as SWAT which is an acronym for Smart Water Application Technology. The sensor within a SWAT device eliminates the need for the homeowner to constantly adjust the irrigation system. Studies have shown there is a significant reduction in water usage when utilizing a SWAT device. If you will take the necessary steps to purchase and use equipment that has been shown to reduce water use, we will help by sharing the cost.

Irrigation Auditor Checklist

1. Products installed:

2. Water Pressure at heads:

Fixed: _____

Rotor: _____

3. Distribution Uniformity (%):

4. Precipitation Rate (inches/hr):

5. Audit performed by:
