I live in the St James neighborhood. The subdivision was developed in the late 80's and early 90's and the street lights throughout the neighborhood are the tired silver gooseneck poles that seem more appropriate on an expressway or highway, rather than a residential street. I would like to see an upgrade in street lighting that is not only more pleasant aesthetically, but environmentally friendly. Utah has beautiful night skies and lighting that reflects downward allows people to enjoy better lighting along streets and sidewalks in addition to the night skies. Energy efficient lighting is more pleasing and helpful for the environment. I realize this is a budgetary item, and like my neighbor says--I would like this issue to get on the radar. I am requesting the replacement of the existing street lights throughout the St. James and Eagles Landing neighborhoods. Thank you for your consideration. Carol Lakin

I live in the St James neighborhood. The subdivision was developed in the late 80's and early 90's. The street lights throughout the neighborhood are tired silver gooseneck poles that seem more appropriate on an expressway or highway, rather than a residential street. Newer subdivisions have much-improved lights that provide more appropriate lighting and aesthetics. As well as energy efficiency. I have noticed older light poles being replaced throughout the town with new black, more aesthetically pleasing lights that provide a more appropriate light to the residential sidewalk and street. They look amazing. I am requesting the replacement of the existing street lights throughout the St. James and Eagles Landing neighborhoods. I am aware of the budgeting ask that this request is, but would like to at least get it on the radar. Thank you. Attachments:
