

Agreement of Maintenance Responsibility

(City of St. George Ordinance Chapter 8-4-14.6)

Interceptors shall be maintained in efficient operating condition by the periodic removal of the full contents of the interceptor. Interceptors shall be fully emptied and cleaned at a frequency such that the combined floating and settled FOGS accumulation does not exceed twenty five percent (25%) of the design hydraulic depth of the interceptor. This is to ensure that the minimum hydraulic retention time and required available volume is maintained to effectively intercept and retain FOGS. The owner of the property on which a common interceptor, and/or the facilities discharging to a common interceptor, are located shall be primarily responsible for the maintenance, upkeep, and repair of the interceptor. All food service establishments (FSE's) shall be required, at a minimum, to implement and comply with the Best Management Practices (BMP's) as outlined in the City's Ordinance Chapter 8.4.14.5.
